

# 7 Ways

## Axiom Supports Working Remotely

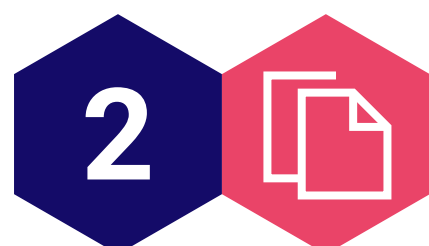

The global pandemic has reshaped how people work — perhaps forever — as home becomes the new office.

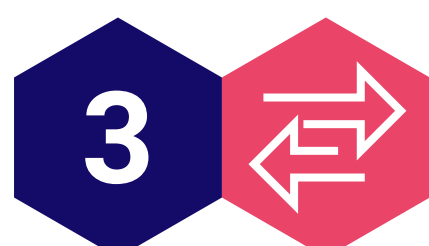

Syntellis' Axiom™ Higher Education Suite supports online working and collaboration, with full features and functionality. Discover 7 ways Axiom empowers your team to do their best work, regardless of location.

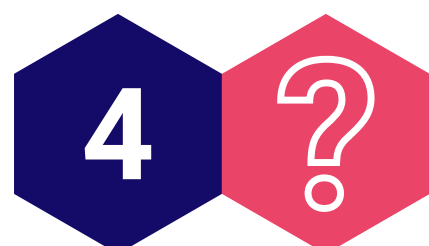

**Access data from anywhere.** If you have internet access and login credentials, you're in. Axiom features comprehensive auditing capabilities and 99.95% uptime.

**Know the status of your docs.** Playing spreadsheet seek and find is no fun. Axiom's approval workflows make it easy to track each step, from input through approvals to keep the process moving.

**Integrate disparate data sets.** Locating and connecting disjointed data shouldn't delay or limit your analysis capabilities. Axiom integrates with student information systems, HR, and general ledger systems to create a single source of truth.

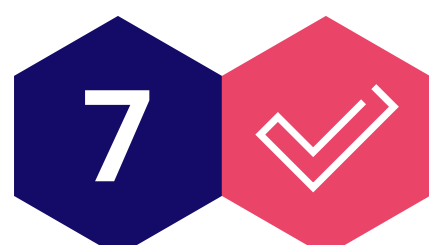

**Avoid version confusion.** Since data is real time and validated, as long as you're connected to the Internet, you'll always access the latest information.

**Automatic reporting.** Dashboards and KPIs for standard or ad hoc reports can be emailed to recipients as a link they can view after logging in.

**Tight security protocols.** Software access is configurable based on job roles, so employees can only access what they're authorized to see.

**Support remote decision-making.** Compile budget requests, commitment planning, capital planning (with remote scoring) and scenario details in reports so participants can videoconference and make informed decisions.
